Chapter 1

Introduction

LaTeX is a typesetting system used for producing high-quality documents¹. It separates content from style, helping writers focus on structure and logic rather than design.

1.1 Why Use LaTeX?

LaTeX automatically formats things like citations, references, and figures. For example, this very sentence is on page 5.

¹LaTeX was originally developed by Leslie Lamport in the early 1980s.

Chapter 2

Landscape Example

Sometimes you might want a wide table or image that fits better on a landscape page. You can switch to landscape like this:

2.1 Wide Table

Chapter	Title	Pages	Notes
1	Introduction	1-5	Basics of La TeX
2	Getting Started	6-12	Sample syntax
3	Landscape Example	13-15	Wide tables/images
4	Conclusion	16	Wrap-up thoughts

Chapter 3

Conclusion

Using LaTeX for writing books makes it easy to handle:

- Automatic Table of Contents
- Page numbering
- Cross-references
- Footnotes¹

And as you've seen, you can also create landscape pages for wide content.

¹This is another footnote, useful for explanations.
